This memorandum provides a detailed technical traffic evaluation for the Cider Solar Farm located on approximately 4,650 acres of land in the Towns of Oakfield and Elba, Genesee County, New York.

PROJECT BACKGROUND

Hecate Energy Cider Solar LLC (Hecate) is developing the Cider Solar Farm Project (the Project), an approximately 500-megawatt (MW) solar project located on approximately 4,650 acres of private land in the Towns of Oakfield and Elba in Genesee County, New York. As illustrated in Attachment A, the Project includes 26 proposed access driveways that intersect with local and county roads at the following locations:

- 1 driveway on Albion Road (County Road 9).
- 1 driveway at western terminus of Ridge Road.
- 4 driveways on Lockport Road (County Road 12).
- 2 driveways on North Byron Road (County Road 12).
- 1 driveway on Miller Road.
- 4 driveways on Oak Orchard Road (County Road 24).
- 1 driveway on NYS Route 98.
- 1 driveway on Maltby Road (County Road 16).
- 2 driveways on Weatherwax Road.
- 3 driveways on Snyder Road.
- 4 driveways on Fisher Road.
- 1 driveway off Lakeside Park Road.
- 1 driveway on Graham Road.

The Study Area for the above Project access road intersections with local and county roads includes the following roadways:

1. **Albion Road** between East Shelby Road (County Road 22) and Lewiston Road.
2. **Lockport Road** between Albion Road and NYS Route 98.
3. **North Byron Road** between NYS Route 98 and Barrville Road (County Road 7).
4. **Fisher Road** between Albion Road and Maltby Road.
5. **Ridge Road** from its western terminus to NYS Route 98.
6. **Graham Road** between Ridge Road and Lockport Road.
7. **NYS Route 98** between Ridge Road and Church Street.
8. **Miller Road** between Barrville Road and North Byron Road.
9. **Oak Orchard Road** between NYS Route 98 and Watson Road.
10. **Weatherwax Road** between Drake Street Road (NYS Route 262) and Maltby Road.
11. **Snyder Road** between Lockport Road and Maltby Road.
12. **Maltby Road/Church Street** between Weatherwax Road and NYS Route 98.

EXISTING VEHICLE TRAFFIC AND USE LEVEL

Existing traffic volume data was obtained from the New York State Department of Transportation (NYSDOT) traffic data viewer. A map of the available traffic data is shown below in Figure 1. It is noted that the study area roadways highlighted in grey do not have traffic data available for review and are all classified as local roadways. NYSDOT Traffic Volumes and Speed data sheets are included in Attachment B.

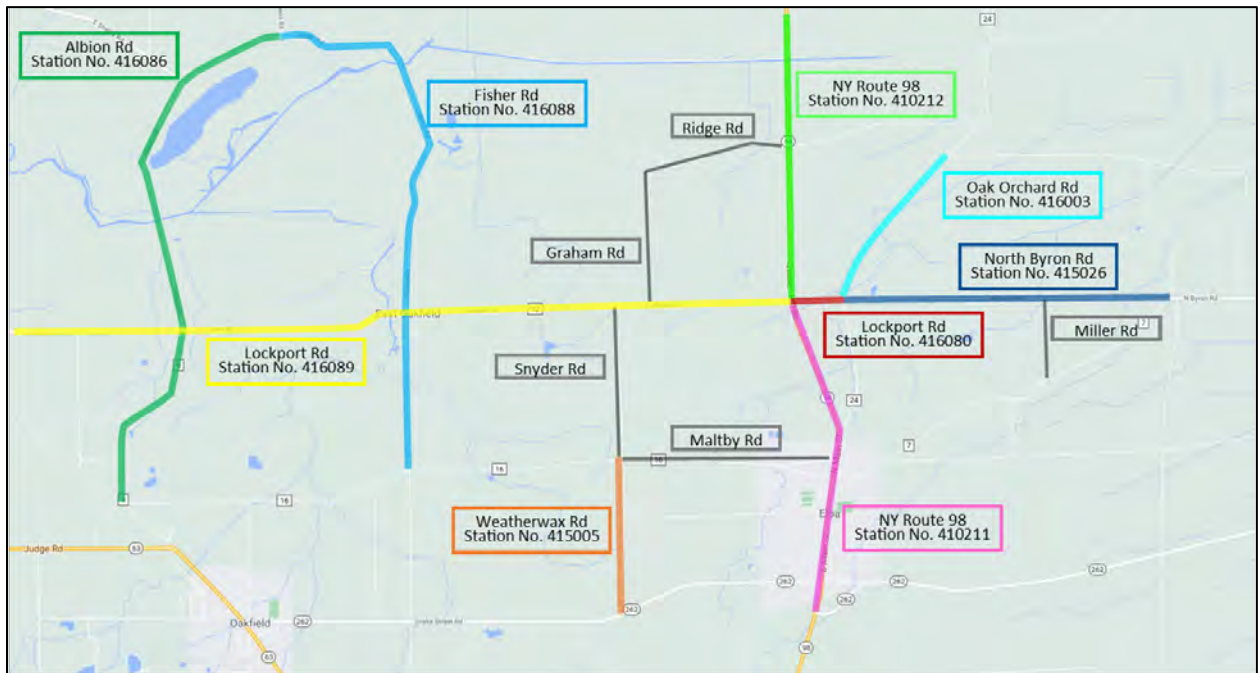

Figure-1: NYSDOT Traffic Data Viewer Locations

Table 1 summarizes study area roadways including the functional classification, Average Annual Daily Traffic (AADT) volumes, and general lane and shoulder widths.

Reference: Traffic Evaluation, Cider Solar Farm

Table 1: Existing Traffic Volume Data and Roadway Characteristics

Road Name	Station No.	Functional Class ¹	Count Start Date	AADT (vpd) ²	Lane Width (feet) ³	Shoulder Width (feet) ³

¹ Functional classification Codes: 06 = Minor Arterial; 08 = Minor Collector; 09 Local

² Average Annual Daily Traffic expressed in vehicles per day (vpd)

³ Widths measured from Google Earth.

Existing roadways within the study area fall into three functional classifications based on the character or service they provide including minor arterial, minor collector, and local roads. Additionally, the Town of Elba and Oakfield are rural towns; therefore, all roads within the study areas are classified as rural.

Rural minor arterial roadways generally link cities and towns that provide for relatively high overall travel speeds that have little through movement interference. There is one minor arterial within the study area, NY Route 98.

Rural minor collector roadways service smaller communities and generally collect traffic from local roads to link them to locally important traffic generators within the rural area. There are four minor collector roadways within the study area including Lockport Road, North Byron Road, Albion Road, and Oak Orchard Road.

Local roads primarily provide access to adjacent land and service travel over relatively short distances as compared to collectors or other highway systems. There are two local roads with available traffic data in the study area: Weatherwax Road and Fisher Road. Ridge Road, Graham Road, Snyder Road, Maltby Road, and Miller Road are all also classified as local roadways, but other traffic information was not available for review. It is assumed that these local roadways will have less or similar volumes than those reported on the minor arterials and collectors.

Reference: Traffic Evaluation, Cider Solar Farm

TRIP GENERATION

Hecate provided estimates for total traffic during various phases of this Project. To analyze the worst-case traffic conditions, assumptions were made to estimate the total hourly traffic that would travel through the study area. The afternoon peak period was studied because this coincides with study area roadway peaks. It is anticipated that 334 trips (39 entering, 295 exiting) would be generated in the PM peak hour as part of the construction process. It is noted that these trips are considered external trips because they travel to/from an off-site location. A breakdown of the trip generation is included in the Attachment C.

Internal trips were also considered which include earthwork trips. These trips originate at one location of the site and are destined to another area of the site in order to provide a level surface for the solar panels. Internal (earthwork) trips will account for an additional 24 total trips (12 entering and 12 exiting).

TRIP DISTRIBUTION

The directional distribution of traffic approaching and departing the Project Site is a function of several variables including population densities, existing travel patterns, and the efficiency of area roadways. Based on a review of the existing travel patterns, surrounding roadway network, and population centers in the area it is estimated that 65% of the construction traffic will travel to and from the site via the south on NY Route 98 and 25% will travel to and from the north on NY Route 98. It was assumed that 5% of the traffic will travel to and from the east and west via Lockport Road and North Byron Road. It is noted that all traffic was assumed to enter/exit one driveway location off Lockport Road to provide for the worst-case scenario, although 26 driveways are proposed throughout the study area. It is noted that the internal earthwork trips were all assigned to Lockport and North Byron Road to provide for a conservative analysis. Figure 2 shows the estimated trip distribution for construction vehicles to access the site.

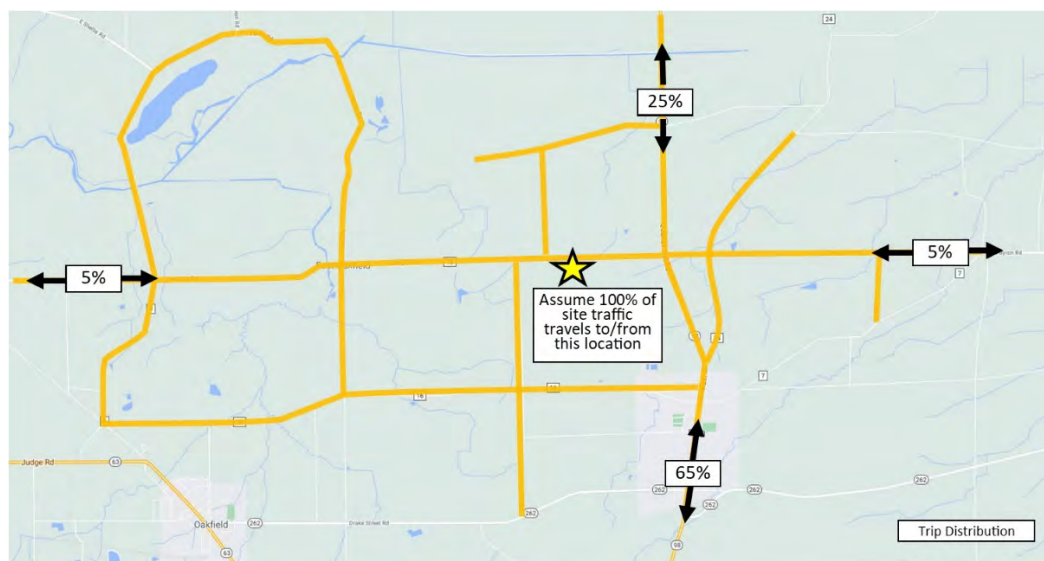

Figure 2: Trip Distribution

Reference: Traffic Evaluation, Cider Solar Farm

TRIP ASSIGNMENT

The PM peak hour site generated construction traffic volumes were assigned to the roadway network according to the distribution and travel patterns described above and are shown below in Figure 3. Trip assignment volumes were then added to the existing PM peak hour volumes used from the NYSDOT Automatic Traffic Recorder to obtain the construction peak traffic.

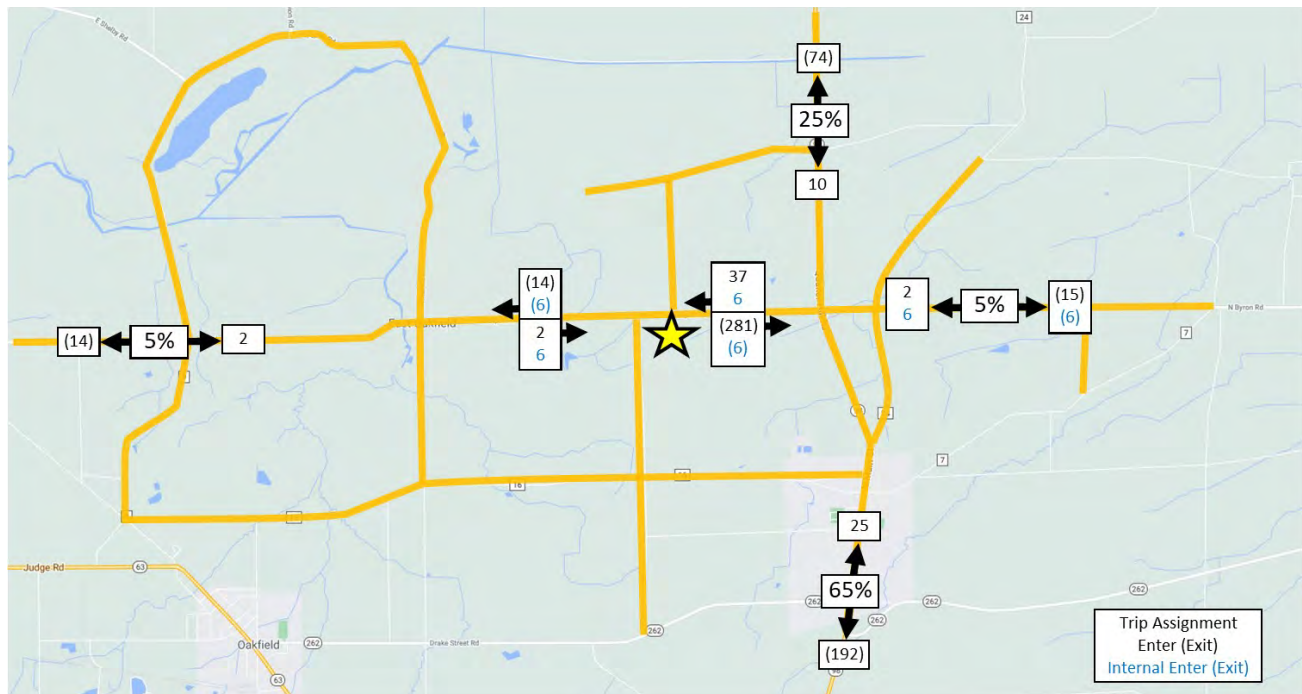

Figure 2: Trip Assignment

CAPACITY ANALYSIS

Linear Roadway Capacity

Capacity analyses relate traffic volumes to the physical characteristics of the roadway. Level of service criteria for automobiles are field measurable and perceivable by travelers. The capacity of these two-lane study area roadways was calculated using the follower density (FD) equation, which is defined as the number of followers per mile per lane. A vehicle is considered a "follower" when:

- The gap between the rear end of the leading vehicle and front bumper of the following vehicle does not exceed three seconds, and
- The speed of the following vehicle is not greater than 12 MPH lower than that of the leading vehicle.

The FD equation was developed by the National Cooperative Highway Research Program (NCHRP) in 2018 in an article titled *"Improved Analysis of Two-Lane Highway Capacity and Operational Performance"*. It considers key performance measures such as the percentage of following vehicles, flow rate, and speed; and is shown below.

Reference: Traffic Evaluation, Cider Solar Farm

$$FD = \frac{PF}{100} \times \frac{v_d}{S}$$

FD = Follower density in the analysis direction (followers/mile)
PF = Percent follower in the analysis direction
 v_d = Flow rate in the analysis direction (vehicles/hour)
S = Average speed in the analysis direction (mile/hour)

The percent follower in the analysis direction was determined using Exhibit 15-2 in the Highway Capacity Manual which compares the directional flow rate of traffic to the percent time spent following, as shown in Figure 4.

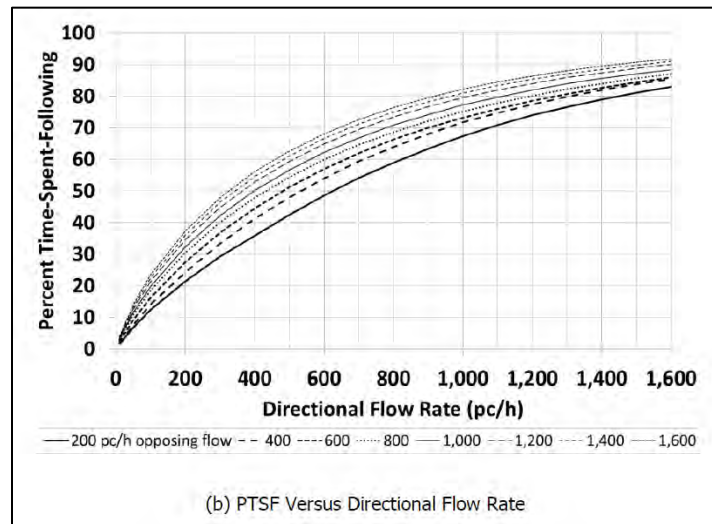

Figure 3: Exhibit 15-2 from the Highway Capacity Manual, Page 15-7; Percent Time Spent Following Versus Directional Flow Rate

The follower density was then compared to Table 2 which shows the level of service (LOS) thresholds. The segment level of service threshold ranges from A to E with LOS A representing free flow conditions with limited platooning of traffic while LOS E represents that the demand is approaching roadway capacity.

Reference: Traffic Evaluation, Cider Solar Farm

Table 1: Follower Density Threshold

Letter Level of Service	High Speed Highways Posted Speed Limit \geq 50 mi/hr	Low-Speed Highways Posted Speed Limit < 50 mi/hr
A	≤ 2.0	≤ 2.5
B	> 2.0 – 4.0	> 2.5 – 5.0
C	> 4.0 – 8.0	> 5.0 – 10.0
D	> 8.0 – 12.0	> 10.0 – 15.0
E	> 12.0	> 15.0

Table used from NCHRP "Improved Analysis of Two-Lane Highway Capacity and Operational Performance" Page 87

As shown in Table 3, the existing roadway capacity will operate with very good levels of service (LOS B or better) for all study area roadways.

Table 2: Existing Roadway Capacity Level of Service

Road Name	Station No.	Peak Hour Volumes ¹		Average Speed ¹		Follower Density	
		NB/EB	SB/WB	NB/EB	SB/WB	NB/EB	SB/WB
Lockport Road	416089	47	43	53	51	A (0.1)	A (0.1)
Lockport Road	416080	39	50	45	44	A (0.1)	A (0.1)
North Byron Road	418006	44	60	56	59	A (0.1)	A (0.1)
Albion Road	416086	37	26	52	55	A (0.1)	A (0.0)
Fisher Road	416088	16	8	44	47	A (0.0)	A (0.0)
NY Route 98	410212	197	187	58	62	A (0.7)	A (0.6)
NY Route 98	410211	360	274	32	32	B (3.9)	B (2.7)
Oak Orchard Road	416003	31	34	48	49	A (0.1)	A (0.1)

¹ Data obtained from the NYSDOT Traffic Data Viewer, included in Appendix A

The additional construction and delivery trips, as specified in the Trip Generation section, were then added to the existing peak hour volumes to calculate the "construction" levels of service. As shown in Table 4, there will be little or no increase to the follower density of the study area roadways.

Table 3: Build Roadway Capacity Level of Service

Road Name	Station No.	Peak Hour Volumes ¹		Average Speed ²		Follower Density	
		NB/EB	SB/WB	NB/EB	SB/WB	NB/EB	SB/WB
Lockport Road	416089	98	350	53	51	A (0.2)	A (0.7)
North Byron Road	418006	52	81	56	59	A (0.1)	A (0.1)
NY Route 98	410212	271	197	58	62	A (0.9)	A (0.6)
NY Route 98	410211	385	466	32	32	B (4.2)	B (4.7)

Intersections

In addition to the linear roadway capacity analysis, an intersection capacity analysis was conducted to provide an indication of how well the roadway facilities serve the traffic demands placed upon them. Roadway operating conditions are classified by calculated levels of service which are expressed in terms of seconds of average vehicle delay. Intersection Level of service considered several factors including roadway geometry, speed, and travel delay and range from LOS A to F, with LOS A representing short vehicle delays and LOS F representing long vehicle delays.

The level of service analysis was conducted for the Existing and Peak Construction conditions for the intersection of Lockport Road and Quaker Hill Road (NY Route 98), as this will be the most heavily impacted intersection. As shown in Table 5, Lockport Road will experience a letter level of service drop from LOS B to LOS D. Since the peak construction period is temporary and LOS D is an acceptable level of service, no mitigation is recommended. Turning movements and the detailed intersection capacity analysis is included in Attachment D.

Table 4: Intersection Level of Service

LOS Calcs		PM Peak Hour	
		Existing ¹	Construction ¹
NY Route 98/Lockport Road			
LockportRd EB	LTR	B (12.8)	D (25.1)
LockportRd WB	LTR	B (14.2)	C (21.2)
NY Route 98 NB	L	A (7.7)	A (7.8)
NY Route 98 SB	L	A (8.0)	A (8.0)

¹ Level of service: Letter (Delay (seconds/vehicle))

ACCIDENT ANALYSIS

Existing accident data for the Project Area was obtained from NYSDOT for the latest three-year period ranging from October 31, 2017 through October 31, 2020. During the three-year period, there were a total of 108 documented accidents with the main apparent factor being related to hitting a deer or animal resulting in 45% of the crashes (49 total accidents). Most non-animal related crashes occurred due to driver error such as failure to yield to the right-of-way (16), unsafe speed (10), unsafe lane change (5), alcohol involvement (3), backing unsafely (1), driver inattention (3), fatigued/drowsy (1), following too closely (1), obstruction/debris (2), oversized vehicle (1), passenger distraction (1), passing or improper lane usage (2), slippery pavement (3), pedestrian error (1), traffic control devices disregarded (2), turning improper (2), and view obstructed/limited (1). It is noted that one crash involved a motorist striking a bicyclist on a dark, unlit roadway.

It is noted that six (6) of the 16 failure to yield to the right-of-way crashes occurred at the intersection of Lockport Road and Quaker Hill Road (NY Route 98), three (3) occurred at the intersection of Fisher Road and Maltby Road, two (2) occurred at the intersection of Oak Orchard Road and North Byron Road, and the remaining five (5) occurred at various intersections. The data was analyzed to determine if there were any patterns causing the failure to yield crashes and it was found that lighting conditions were not a factor as only two (2) of the 16 crashes occurred on a dark, unlit roadway. Weather conditions were also studied and noted to not be an apparent factor. Nine (9) crashes occurred on a dry road, five (5) occurred on a wet road, and the remaining two (2) occurred in snowy/icy road conditions.

Reference: Traffic Evaluation, Cider Solar Farm

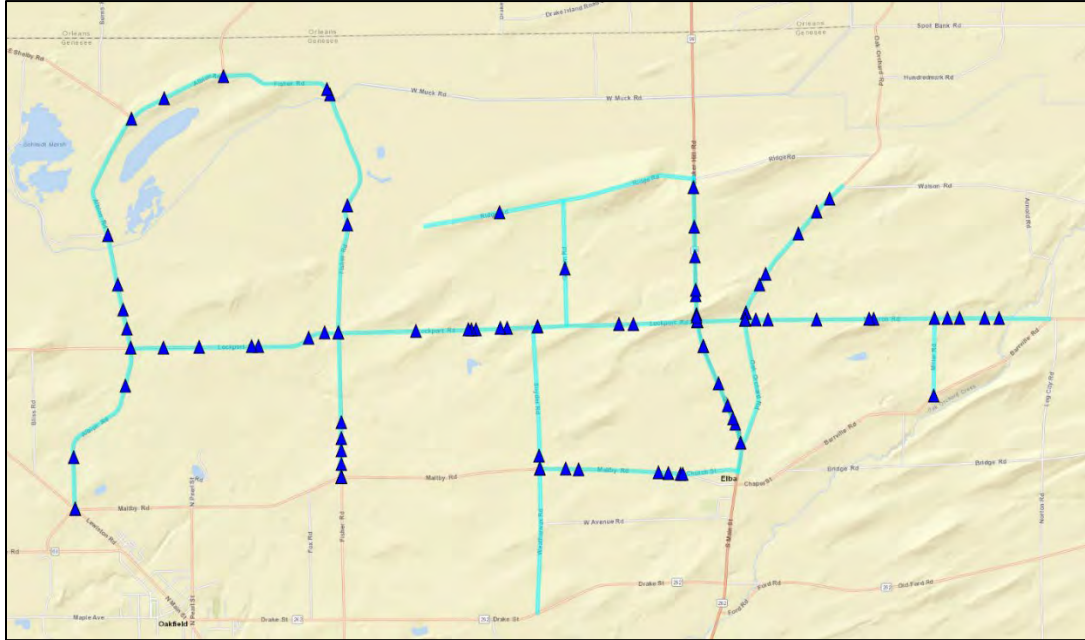

Figure 4: Study Area Crash Locations

Of the 108 reported crashes, 76 of them resulted in property damage only (70%), while 24 resulted in an injury (22%), 7 resulted in a non-reportable collision (7%), and one crash was listed as a fatality. The fatal accident was a right-angle crash with two motor vehicles with an apparent factor listed as failure to yield to the right-of-way. The collision resulted in two fatalities and occurred at the intersection of Quaker Hill Road (NYS Route 98) and Lockport Road with dry road conditions. Since this is a major intersection within the study area, other factors were studied to try and determine a cause. Sight lines were analyzed and found to be more than adequate (1,000'+) for drivers traveling northbound. Additionally, this accident occurred in daylight hours. It is noted that there is a streetlight located on the southwest corner of the intersection.

Of the 108 crashes, 10 occurred in November and December of 2017, 37 occurred in 2018, 45 occurred in 2019, and 16 crashes occurred from January to October of 2020 which averages out to 36 crashes per year within the study area. A comprehensive accident summary sheet along with the vehicle description reports can be found in Attachment E.

SIGHT DISTANCE ANALYSIS

Sight distance was approximated at each of the twenty-six (26) driveway locations with values compared to AASHTO minimums. Sight distance values included both stopping sight distance (SSD) for the main roadways as well as Intersection sight distance (ISD) at each of the driveways. Diagrams were prepared for the following 26 proposed driveway locations to measure the intersection and stopping sight distances at each location:

- Albion Road (County Road 9) – 1 driveway
- Western terminus of Ridge Road – 1 driveway
- Lockport Road (County Road 12) – 4 driveways

Reference: Traffic Evaluation, Cider Solar Farm

- North Byron Road (County Road 12) – 2 driveways
- Miller Road – 1 driveway
- Oak Orchard Road (County Road 24) – 4 driveways
- NYS Route 98 – 1 driveway
- Maltby Road (County Road 16) – 1 driveway
- Weatherwax Road – 2 driveways
- Snyder Road – 3 driveways
- Fisher Road – 4 driveways
- Lakeside Park Road – 1 driveway
- Graham Road – 1 driveway

ISD is based on the time required for perception, reaction, and completion of the turning maneuver into or out of the site driveway. Calculation of the ISD includes both the time to turn and clear the intersection without conflicting with other approaching vehicles, and the necessary time to accelerate to the operating speed of the roadway without causing vehicles on the mainline to unduly reduce their speed.

The intersection sight distances were measured using topographic survey and site plans for passenger vehicles and combination trucks. It was found that four locations include potential vegetation and tree line conflicts and two (2) locations do not meet ISD due to vertical curvature of the roadway. When studying the combination truck ISD, two additional locations were found to have limited sight distances due to a horizontal curve and another vertical curve limitation. These locations are limited, but they are not critically limited; therefore, it is recommended the contractor trim vegetation within the frontage. If trimming of vegetation is not possible then installation of additional temporary work zone construction entrance/intersection warning sign shall be used to heighten awareness of the proposed access and construction vehicle activity. The ISD measurements are shown in Table 5.

SSD is the distance along the roadway for a vehicle approaching an intersection from either direction to perceive, react, and come to a complete stop before colliding with an object in the road. The stopping sight distances were also measured using topographic survey and site plans. It was found that all proposed driveways meet or exceed minimum AASHTO standards, as shown in Table 16-6. The sight distance figures and limiting factors are included in Attachment F.

SUMMARY

Based on the above analysis the proposed Project is not anticipated to have any significant adverse traffic impacts on the local roadways during construction. Where possible the contractor shall trim vegetation at all driveway locations with limited sight distance and/or install additional construction entrance/intersection warning signs.

Attachment C: Trip Generation Summary

TRIP GENERATION SUMMARY

Phase of work	Vehicle Type	Approximate Vehicle Weight (lbs)	Approximate Vehicle Size (feet)	Estiamted Trip Frequency (total)	Estimated Trip Time of Day	Peak Daily Trips	Assumptions	Daily Entering	Daily Exiting	PM Peak Entering	PM Peak Exiting	PM Peak Notes
Grading and Trenching	Small Bulldozer	17,000 to 25,000		20	Arrival: 7:00 AM Departure: 5:00 PM	0	Bulldozers will arrive early in the process; no impact on peak traffic day	0	0	0	0	--
Craft Workers	Passenger Vehicle (P)	6,000	19	81,000	Arrival: 7:00 AM Departure: 5:00 PM	630	315 daily workers entering; 315 daily workers exiting	315	315	32	284	10% of daily Enter, 90% Exit
Fencing and Fencing Installation	Heavy Duty Pickup Truck	20,000	20	187	Arrival: 7:00 AM Departure: 5:00 PM	0	Assume fencing operations occur after peak construction	0	0	0	0	--
Roadway Gravel	Dump Truck (SU-30)	70,000	30	1,500	Arrival: various (between 7 and 5) Departure: various (between 7 and 5)	25	Assume all trips occur during 3 month peak with 5 day work weeks = 60 days	13	13	2	2	Assume equal loading throughout the day; so approx 1.5 trucks loaded/hr; round up to 2 trucks entering & exiting
Trenching Sand	Dump Truck (SU-30)	70,000	30	500	Arrival: various (between 7 and 5) Departure: various (between 7 and 5)	8	Assume all trips occur during 3 month peak with 5 day work weeks = 60 days	4	4	0	1	5 trucks throughout the day so assume 1 exits during PM peak
Trackers	Truck Trailer (WB-67)	70,000	75	2,590	Arrival: various (between 7 and 5) Departure: various (between 7 and 5)	44	Assume all trips occur during 3 month peak with 5 day work weeks = 60 days	22	22	3	3	Assume constat arrival throughout the day; 22/8 hour work day = 2.75 peak trips in&out
PV Modules	Truck Trailer (WB-67)	70,000	75	2,300	Arrival: various (between 7 and 5) Departure: various (between 7 and 5)	38	Assume all trips occur during 3 month peak with 5 day work weeks = 60 days	19	19	2	2	Assume constat arrival throughout the day; 19/8 hour work day = 2.375 peak trips in&out
Cabling	Truck Trailer (WB-67)	70,000	75	300	Arrival: various (between 7 and 5) Departure: various (between 7 and 5)	5	Assume all trips occur during 3 month peak with 5 day work weeks = 60 days	3	3	0	1	Assume constant flow throughout the day so maybe 1 exits during peak
Inverter Skids	Truck Trailer (WB-67)	70,000	75	550	Arrival: various (between 7 and 5) Departure: various (between 7 and 5)	10	Assume all trips occur during 3 month peak with 5 day work weeks = 60 days	5	5	0	1	Assume constant flow throughout the day so maybe 1 exits during peak
Substation Equipment	Truck Trailer (WB-67)	70,000	75	10	Arrival: various (between 7 and 5) Departure: various (between 7 and 5)	0	Assume substation equipment arrives outside of peak construction season	0	0	0	0	--
Substation Transformer	Truck Trailer (WB-67)	70,000	75	3	Arrival: various (between 7 and 5) Departure: various (between 7 and 5)	0	Assume substation equipment arrives outside of peak construction season	0	0	0	0	--
Miscellaneous Deliveries	Truck Trailer (WB-67)	70,000	75	380	Arrival: various (between 7 and 5) Departure: various (between 7 and 5)	6	Assume all trips occur during 3 month peak with 5 day work weeks = 60 days	3	3	0	1	Assume constant flow throughout the day so maybe 1 exits during peak
Total	--	--	--	89,340	--	750	--	384	384	39	295	--
Internal trips - traveling from one zone to another												
Earthwork	Dump Truck (SU-30)	70,000	30	11,500	Arrival: various (between 7 and 5) Departure: various (between 7 and 5)	192	Assume all trips occur during 3 month peak with 5 day work weeks = 60 days	96	96	12	12	Assume equal loading throughout the day; so approx 12 trucks loaded/hr
